Annual Report
of the Romsey Rural District
for 1895

To

District

The Romsey Rural Council

Romsey
February 29. 1896

Gentlemen

The Mortality in the Rural District during the year, was 121. A larger number than any recorded for at least 16 years, and unquestionably owing to the deadly effect of the Influenza: the number was 36 above the average for the last 10 years. Eight of the 121 deaths were those of parishioners of the Urban District, who died in the workhouse.

There were 13 deaths at ages under one year being at the rate of 78'8 per 1000 registered births - I do not know that any one of these deaths was that of an illegitimate child. There were 5 deaths recorded between the ages of one year and five years.

Influenza. This disease, which was comparatively slight in 1894 - assumed a much more serious front in 1895 - a few cases occurred in January - but during February and March (somewhat later, and less suddenly than its appearance in the Urban District) it rapidly increased and became Epidemic towards the close of February and throughout March - beginning to lessen towards the end of the latter month and fading out in April - it proved fatal to many, especially to the old and infirm and to those subject to chronic disease, and its fatal influence extended throughout May: there were from all causes (not directly from Influenza) 11 deaths in January; 10 in February; 26 in March; 13 in April; and 15 in May; since which the Mortality

has sunk more nearly to its normal amount;—so far as my own observation extended, very few young people suffered from it only 10 out of the 75 deaths to the end of May, were those of children under 5 years of age. None having been registered as from Influenza; whilst this disease has re-appeared now for several years it never prevailed so extensively as during the Spring months of 1895: in our own practice 104 Cases, at least, were attended by us in the Rural District.

Scarlet Fever. a mild case of this disease was notified from Awhridge in April; the source of infection could not be traced. In September and October some 8 or 9 cases occurred in the farther parts of Ashfield, Goothill, Rownham and Brown Hill: they appeared to arise from the outside districts—as the disease was prevailing there—the strictest isolation that could be obtained was enforced—disinfectants were freely supplied and frequent visits were paid by the Inspector of Nuisance, and by ourselves; and the Inspector of Nuisances, disinfected the premises as soon as the cases were considered clear of the disease, by the complete desquamation of the cuticle; the disease was in no instance severe.

Small pox. a single example of this Exanthem presented itself in January in the person of a Hairy man, residing in a Farm house in Hursling: strict isolation was enforced—all suspicious clothes were destroyed, and the premises disinfected after the perfect recovery of the patient: the origin of the case could not be certainly traced. the man had been to London just previously to the attack—no one took the infection from him.

Typhoid or Enteric Fever. one instance of this Fever was notified; and it is remarkable that the same man suffered from the disease last year. the Well-Water was examined both this year and last and was found to be satisfactory: the closets are too

close to the house, and attention has been directed to this matter the man is a Carpenter working at many places, but so far as I have been able to discover, no fever has been present at any of them.

Liphtheria. a death from this complaint occurred at Hursling in a girl 8 years old - the only insanitary condition was that of the well-water drunk by the family - and a new well has been dug in consequence. a second but milder case was notified, who resided within a few hundred yards of the first and attended the same school but this child did not drink the same water - the school was not closed, and no further case occurred; much obscurity shrouds these isolated outbreaks of this fell disease.

Erysipelas. Single cases of this affection were notified in March at Bentley; and at Hursling, in December; the cause of which were not apparent.

Puerperal peritonitis proved fatal at Sherfield English in the only case that occurred in the District throughout the year.

Diarrhoea was prevalent in September and October - but was never Epidemic. and in no instance throughout the year did it prove fatal to the young; two men, over 70 years of age, alone succumbed to its influence.

Whooping Cough - appeared here and there in the district in April - May - June and December and doubtless in the intervening months - (it has since become Epidemic a fatal case occurred in May and another in June.

Phthisis. proved fatal in 6 instances - all (with one exception when death took place at 62) between the ages of 21 and 37. the 6 deaths are nearly in the proportion of 5 percent 4959 - of all the deaths in the District - during the year. Tuberculosis

caused 2 deaths. - During the month of May, I made a House to House visitation throughout Lee, Hurstling, Ashfield and Whitenap examining especially the sleeping accommodation - the water supply - the kind of closets used and their condition also the number of the inmates sleeping in the Cottages visiting in all 88 houses. I found 2 houses only, with but one bed-room; - 33 with two; and 53 with three or more bed rooms, comparing favourably in this respect, with the Urban District - Ten houses obtained their water - supply from the S.H.W.C's service; 42 by pumps; 13 from draw-wells; and 5 from shallow springs. I have examined the water of a large number of the wells; in most cases I found it fairly good - but by no means equal in purity to that of S.H.W.C; in a few cases I have felt it necessary to require the cleaning out of the well.

Twenty houses used water-pans or water closets; - 4 had pails; 62 had the old C.V.C's; and 2 had both W.C and C.V.O.

There were a few instances of over-crowding; in each case in a house having three bedrooms - one had 7 inmates of 12 years and over with 4 under 12 - a second had 4 of 12 years and over and 6 under - 10 in all: a third 5 of 12 years and over and 5 under: - these were all that I thought worthy of note, such advice was given in each case, as would reduce the mischief to a minimum.

The tenements called "Nine Cottages" are the worst constructed (being built of very soft bricks) and the drainage is the most defective, of any that I have inspected in Hurstling - I understand that it is life - hold property and no one cares to do any thing to them; fortunately the water of the well is good.

Mr. Dawkins - the Inspector of nuisance has exercised unceasing diligence in his visits to all parts of the District and I am in almost daily communication with him - giving such advice and directions, as from time to time seemed to me necessary or advisable. I append his summary of work done by him during the year 1895

The Births registered during the year from the Rural District numbered 165, whilst the Deaths were 121 giving 44 as the natural increase of population. the actual number of inhabitants, however, remains almost stationary from one decade to another.

The 121 deaths give an annual average death-rate of $18\frac{3}{4}$ (18.75) per 1000 living - of the 121 deaths, 8, although dying in the workhouse, which, is situated in the Rural District, were yet originally parishioners of the Urban Sanitary District. Some of whom had been long resident in the workhouse - deducting these 8 it reduces the number to 113 as that of the deaths of Rural parishioners and would reduce the annual average death-rate for the year 1895 to 17.503 per 1000 living.

The 165 registered births give an annual average Birth-rate of $25\frac{1}{2}$ (25.5) per 1000 living.

The health Condition of the Rural District was less satisfactory than that of the Urban District, throughout the year; the death-rate being higher than that of the Urban, although with the exception of the Influenza (which was alike prevalent in both) I cannot fix upon any cause of the excessive mortality in the Rural District.

At the close of the year, with the exception of Whooping Cough - the District was free from infectious disease. the rate of mortality was normal - and nothing in the Sanitary Condition of the District calls for special notice.

The following Tables summarize some of the facts of the year, as to the relative number of deaths - the causes of death under 5 years and the number of deaths occurring in the several months - and in the different parishes.

Monday

Bural District,

TABLE OF DEATHS during the Year 1895, in the Monday
classified according to DISEASES, AGES, and LOCALITIES.

[illegible]

The subjoined numbers have also to be taken into account in judging of the above records of mortality. See Note 5 on back.

Deaths occurring outside the district among persons belonging thereto.

Deaths occurring within the district among persons not belonging thereto.

* The heading of column 19 is left blank for the insertion of Influenza, or any other disease which it may be thought desirable to record.

7

NOTES ON TABLES A AND B.

NOTE 1. *Medical Officers of Health of "Combined Districts" must make a separate Return for the District of each District Council.*

2. *Medical Officers of Health acting for a portion only of the District of a District Council should write, in the heading of the Table, the designation of the Division for which they act.*

3. *The words "Urban," "Rural," or "Metropolitan" must be inserted in the appropriate space in the heading, according as the District is Urban or Rural, or is within the Metropolitan Area.*

4. *The "Localities" adopted for the purpose of these statistics should be areas of known population; such as parishes, groups of parishes, townships or wards.*

As stated at the head of the first column in each Table, *Public Institutions* should be regarded as separate localities, and the deaths in them should be separately recorded. Workhouses, Hospitals, Infirmaries, Asylums, and other establishments into which numbers of people, and especially of sick people, are received are Public Institutions for the purpose of these statistics.

5. *The deaths which have to be classified in this Table (A), and summed up in the horizontal line of "Totals," are the whole of those registered as having actually occurred in the several localities comprised within the Division or District. But the registered number of deaths frequently requires correction before it can give an exact view of the mortality of a Division or District; and the two lowest horizontal lines are provided for the purpose of enabling Medical Officers of Health to indicate, to the best of their ability, what the extent of such corrections should be. Details concerning the corrective figures, e.g., the institutions that have been considered, or the particular localities to which corrections apply, may appear in the text of the report or in supplementary tables.*

Area and Population of the District or Division to which this Return relates.	
Area in Acres	28.507
Population (1891)	6.456
Death Rates.	General 18.742 { per 1,000 Population, estimated to middle of 1895.
	Infant (under one year of age) 78.8 { per 1,000 Births Registered.

In recording the facts under the various headings of Tables A and B, attention has been given to the notes endorsed on the Tables.

Francis Buckell Medical Officer of Health.

(Date) *February 29th*, 1896.

TABLE OF POPULATION, BIRTHS, AND OF NEW CASES OF INFECTIOUS SICKNESS, coming to the knowledge of the Medical

Officer of Health, during the year 1895, in the Normsey District; classified according to

DISEASES, AGES and LOCALITIES.

NAMES OF LOCALITIES adopted for the purpose of these Statistics; Public Institutions being shown as separate localities. (See Note 2 on back of sheet.)	POPULATION AT ALL AGES.			Registered Births.	Aged under 5 or over 5.	NEW CASES OF SICKNESS IN EACH LOCALITY, COMING TO THE KNOWLEDGE OF THE MEDICAL OFFICER OF HEALTH.													NUMBER OF SUCH CASES REMOVED FROM THEIR HOMES IN THE SEVERAL LOCALITIES FOR TREATMENT IN ISOLATION HOSPITAL.

State here whether "Notification of Infectious Disease" is compulsory in the District Yes Since when? January 1894 Besides the above-mentioned Diseases, insert in the columns with blank headings the names of any that are notifiable in the District, and fill the columns accordingly. State here the name of the Isolation Hospital used by the sick of the District. Mark (H) the Locality in which such Hospital is situated; and if not within the District, state where it is situated There is no such Hospital

NOTES ON TABLE B.

(See also Notes on back of Table A.)

NOTE 1. The present *Table B.* is concerned with population, births, and sickness (not with mortality) in the district or division to which the Table relates.

2. As stated in the heading of Col. (a), *Public Institutions* should be regarded as separate localities, and the new cases of sickness in them should be separately recorded. Workhouses, Hospitals, Infirmaries, Asylums, and other establishments into which numbers of people, and especially of sick people, are received, are Public Institutions for the purpose of these statistics.

3. *Comments on any unequal incidence of notifiable disease upon the several localities, and considerations as to the local incidence of consumption and other prevalent diseases, should be made in the text of the Report.*

1895

Premises Inspected during the year 1895

Nursling Parish

Jan 24	Chimney in a dangerous state -	Attended to
27	Case of Small pox -	Supplied disinfectants and Fumigated dwelling
Feb 15	Closet full -	Cleaned out
"	Closet full -	Cleaned out
Apr 13	Drainage in a bad state -	Attended to
May 8	Closet not fit for use -	Attended to
June 24	Closet in a dirty state -	Attended to
July 19	Closet full and offensive -	Nuisance abated
"	Closet full	Cleaned out
Sep 19	Two Cases of Scarlet Fever -	Inspected and took disinfectants took sample of water to M.C.H. Fumigated dwelling
27	Closet in a bad state -	Attended to
Oct 4	Three Cases of Scarlatina -	Inspected and supplied disinfectants & Fumigated dwelling
Nov 16	Case of Diphtheria -	Inspected and took disinfectants - took sample of water to M.C.H. and Fumigated dwelling
18	Pigsties in a bad state -	Repaired and cleaned
"	Closet full and offensive -	Nuisance abated
28	Closet near the well -	Took sample of water to M.C.H. New well dug
30	Case of Scarlatina -	Inspected & took disinfectants took sample of water to M.C.H.
Dec 10	Case of Erysipelas -	Inspected & took disinfectants
21	Well covering in a bad state -	gave notice

East Dean Parish

June 28	Swelling house in a bad state -	Inspected Fumigated and Lime washed
---------	---------------------------------	-------------------------------------

1895	Mottisfont Parish	
Jan 10	Closest full and offensive -	Nuisance abated
Mar 18	Well in a dangerous state -	Attended to
Apr 4	Pigsties in a filthy state -	Nuisance abated
Sep 5	No water fit for drinking -	Gave notice
Nov 13	Closest full and offensive -	Cleaned out
"	Closest full and offensive -	Attended to
Omitted Mar 30	Case of Erysipelas -	Inspected & took disinfectants

Braishfield		
Jan 12	Closest full and offensive -	Attended to
Aug 22	Closest full	Cleaned out
29	Closest in a bad state -	Attended to
Oct 14	Case of Overcrowding -	Remedied
29	Premises in a dirty state -	Nuisance abated
Nov 8	Closest in a bad state -	being attended to

East Wellow Parish		
Jan 16	Closest full and offensive -	attended to
Feb 9	Well covering in a bad state -	attended to
16	Case of Typhoid -	Inspected & took disinfectants

West Wellow Parish		
Feb 8	Closest full	Cleaned out
Mar 22	Closest in a bad state -	New Closest
"	Well covering in a bad state -	Attended to
"	Closest in a bad state -	Repaired & cleaned
Apr 19	Pigsties in a filthy state -	Nuisance abated
July 19	Drainage from premises into Road -	Discontinued
Aug 16	No proper closet for use -	New closet put
"	Closest in a bad state -	New closet put
Nov 9	Pigstye in a filthy state -	Attended to
"	Closest falling down -	New closet put

Romsey Extra Parish

Apr 1	Closet full	Cleaned out
30	Closet in a filthy state -	Nuisance abated
May 23	Water complained of as bad -	Took sample to M. & H.
June 11	Carass of Lontrey in offensive state -	had it buried
19	Closet in a bad state -	new closet put
"	Closet in a bad state -	Cleaned out & Repaired
July 4	No water fit to drink -	Water from water comp ^y
Sep 12	Pigstye in a bad state -	Attended to
30	Case of Scarlatina -	Inspected and took Disinfectants and Furnigate dwelling
"	Case of Scarlatina -	Inspected and took Disinfectants & water to M. & H. Furnigated dwelling
"	Case of Scarlatina -	Inspected and took Disinfectants. took sample of water to M. & H. Furnigated dwelling
Oct 7	Closet full and offensive -	Attended to
29	Closet in a bad state -	new closet put
Nov 5	No water fit to drink -	Took sample to M. & H.
Dec 10	Well covering in a bad state -	new covering put

Mitchelmarsch Parish

Mar 18	Closet full	Cleaned out
May 7	Closet in a bad state -	Repaired & new Pail
9	Closet in a bad state -	Attended to

Awbbridge

Mar 9	Case of Neglect of parents -	Removed to W. H. Infir ^{ny}
